Total number of inspections of regulated entities conducted within the reporting period is obtained from the commission's data system. The total number includes biannual inspections, inspections of training programs in progress (also called audits), an inspection of an entity as part of an investigation, and meetings associated with inspections.

Each written examination is counted. The measure records the total number of examinations administered for fire service certification purposes. A retest, usually conducted due to failure of an initial exam, is counted as an examination as well.

The total number of individuals who passed their examination as reflected in the agency data management system (numerator) is divided by the total number of individuals examined (denominator) and then multiplied by 100 to achieve a percentage. Persons taking an examination multiple times are counted each time they take the exam.

The total number of individuals holding one or more certifications with the agency is obtained from the data system at the end of the reporting period. An individual who holds more than one certification is counted only once. The measure records the number of certified persons, regardless of whether the individuals are associated with a fire protection entity.

The total number of training providers with one or more active certifications is counted. A training provider that holds more than one certification is counted only once.

Total cost related to inspection activities for the reporting period (numerator) is divided by the total number of inspections conducted during the same period (denominator) to determine the average cost. Costs used to perform the calculation include salaries of inspection personnel (including 25% of compliance manager's salary); travel costs directly related to inspections and inspection-related meetings with regulated entities; supplies; document review and handling; and notifications. Indirect costs are excluded.
